DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-19 are rejected under 35 U.S.C. 102(e) as being anticipated by Jones et al. (US Patent No. 6,021,397).

As per claims 1-19, all the claimed features of a system and a computer-implemented method of allocating a trade of a number of financial instruments are taught by Jones et al. Jones et al teach a system and method comprising means or steps for:

Receiving at an allocation management system from an order management systems, a message descriptive of a trade of a financial instrument, the message comprising a financial instrument identifier and a size of a trade;

Determining a risk class associated with the identified financial instrument;

Determining a first plurality of portfolios associated with the risk class and a target ratio for each of the portfolios and allocating the trade of the financial instrument among each of the first plurality of portfolios based on the target ratio associated with each of the portfolios.

Applicant is directed to column 5, line 51 to column 7, line 10 ; column 6, lines 40-66; column 11, line 35 to column 12, line 32 of Jones et al.

Jones et al further disclose computing target ratios, employing a multi-strategy portfolio associated with different risk classes, querying various databases such as historical databases, trade allocation history databases. See column 8, line 50 to column 9, line 55 of Jones et al. Trade information and messages are exchanged using a standard message exchange protocol. See figure 1 of Jones et al.

Claim Rejections - 35 USC § 101

2. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-14 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The basis of this rejection is set forth in a two prong test of:

- (1) whether the invention is within the technological arts; and
- (2) whether the invention produces a useful, concrete and tangible result.

For a claimed invention to be statutory, the claimed invention must be within the technological arts. Mere ideas in the abstract (i.e., abstract idea, law of nature, natural phenomena) that do not apply, involve, use or advance the technological arts fail to promote the “progress of science and the useful arts” (i.e., the physical sciences as opposed to social sciences, for example) are found to be non-statutory subject matter. For a process claim to pass muster, the recited process must somehow apply, involve, use, or advance the technological arts. In the present case, claim does

not recite any structure or functionality to suggest that a computer performs the recited claims.

Thus, claim 1 is rejected as being directed to non-statutory subject matter.
